AI-assisted marking

Save time with **AI-powered** insights

 **Mark all four skills:**
Our AI-reviewer grades reading, writing, listening and speaking

 **Spot patterns of learning proficiency at pupil, class and school level**

 **In-depth analysis** to help you understand our AI-reviewer's grade justification

Our new feature uses **AI technology** to streamline the marking process, allowing teachers to save time and focus on what matters – supporting the learning and development of their students.

Introducing partially correct: AI technology looks beyond the direct answer to a question and automatically marks for errors that you didn't even realise you were looking for, helping you to provide targeted follow-up support.

We've trained our AI technology using pedagogically sound frameworks, ensuring accurate assessments you can trust. However, **teachers have ultimate control** and can override grades at any point.
